**BULK DISTRIBUTION OF  
HAND DISINFECTANT IN  
HIGH TRAFFIC AREAS**

# Canisters (Because the dispenser bottles are running low)

*DesiStand Canister is a way to secure the logistics of disinfectants. In places where there are a lot of people moving through, like shops, train stations or other public buildings a larger container to pump from might save a lot of time.*

*Larger containers reduces the need of changing bottles that run out of liquid. Saving time. When you buy a DesiStand Canister system you only need to add a pump to the container and the system is ready.*

*As there is a lack of suitable bottles and especially pump bottles on the market, the Canister version might be the sole solution to secure deliveries as you can use 5-10 liter containers.*

*DesiStand Canister comes flat packed and can be delivered world wide. It is very easy to assemble and comes with tools needed. It takes you no more than a few minutes to set it up.*

The delivery includes the construction, fastening belt and an A4 poster holder with snap frames.

Depending on the canister model and the pump used the trigger will be approximately 85-110cm up from the floor level. The plate is 57cm from the floor + canister height + height of trigger on pump.

DesiStand Canister comes equipped with an A4 size poster holder. Excellent for your messages and instructions to visitors.

The weight of the system, without a canister is 6,7kg and the total height is 125-135cm depending on how you choose to place the poster holder.

Aluminum snap frame poster board with protective film.  
21x30cm poster size

ABS plastic top

Aluminum constructions

Galvanized steel feet.
